## **Continued Learning of Tissue-specific Immunity from the Immuno-Pathological Spectrum of Leprosy**

Pranab Kumar Das 2020-01-17 Leprosy is one of the oldest recorded debilitating diseases affecting mankind, the immunopathology of which is characterized by fluctuating granulomatous inflammation that targets mainly skin and peripheral nerve. The disease is caused by infection with *Mycobacterium leprae*, a slow growing obligatory intracellular and non-cultivable organism. The disease is manifested with diverse pathology due to varied immune (both innate and adaptive) responses of the hosts as a result of cognate interaction with the organism. Of note, leprosy can be regarded as a unique model to elucidate the complexity of host immunity at both skin and systemic levels.

*De geheime oorlog* Max Hastings 2015-10-12 *De Tweede Wereldoorlog* is op vele fronten uitgevochten: op slagvelden en stranden, in het luchtruim en in en op het water van de wereldzeeën. Maar van even vitaal belang was de strijd die ondergronds werd geleverd door inlichtingendiensten, spionnen, dubbelspionnen, codebrekers, infiltranten en partizanen. In dit meesterlijke boek vertelt Max Hastings voor het eerst de geschiedenis van de wereldwijde geheime oorlog tussen alle strijdende partijen en de mensen die in die oorlog hun leven waagden. Hij baseert zich daarbij niet alleen op Amerikaanse, Britse en Duitse bronnen maar, heel bijzonder, ook op Russische en Japanse archieven. Het resultaat is een caleidoscopische blik op een vrijwel onverkend landschap. Aan de hand van een aantal cruciale momenten laat Hastings de enorme invloed zien die het werk van geheim agenten en ondergrondse operaties

op het verloop van de oorlog in West en Oost hebben gehad. Zijn relaas voert van Bletchley Park, waar de Duitse Enigma-code werd gebroken, naar de reusachtige Sovjet-spionagemachine, die in omvang alle inspanningen van de andere oorlogvoerende naties in het niet deed zinken. De geheime oorlog onthult tal van nieuwe, verrassende feiten en voorbeelden van bedrog, misleiding, verraad en incompetentie, bij alle partijen. Max Hastings heeft een ongekend gedetailleerde kennis van wat er in de Tweede Wereldoorlog is gebeurd en gaat scherpe oordelen niet uit de weg, maar combineert dat, zoals altijd, met veel aandacht voor de menselijke kant van de oorlog, de moed die voor dit werk nodig was en de spanning waaronder het moest worden uitgevoerd.

Site-directed insertion of transgenes  
Sylvaine Renault 2012-07-30 The post-genomic era has brought new challenges and opportunities in all fields of the biology. In this context, several genome engineering technologies have emerged that will help deciphering genes function by as well as improve gene therapy strategies. Genomic modifications such as knock-in, knock-out, knock-down, sequence replacement or modification can today be routinely

performed. However, in front of this large palette of methodologies scientists may experience difficulties to gather useful information's scattered within the literature. This book aims to present the state of this field from basic mechanisms of site-directed modifications to their applications in a wide range of organisms such as bacteria, yeast, plants, insects, mammals. It will discuss the problems encountered when using the random integration strategy and present the recent advances made in targeted genome modification. Technologies based on Zinc Finger nucleases, Meganucleases, TALEN, CRE and FLP recombinase,  $\square$ C31 integrase, transposases and resolvases are fully detailed with their strengths and weaknesses. All these information's will help students and experienced researchers to understand and choose the best technology for their own purposes.

**Encyclopedia of Criminal Activities and the Deep Web** Khosrow-Pour D.B.A., Mehdi

2020-02-01 As society continues to rely heavily on technological tools for facilitating business, e-commerce, banking, and communication, among other applications, there has been a significant rise in criminals seeking to exploit these tools for their nefarious gain. Countries all over the world are seeing substantial increases in identity theft and cyberattacks, as well as illicit transactions, including drug trafficking and human trafficking, being made through the dark web internet. Sex offenders and murderers explore unconventional methods of finding and contacting their victims through Facebook, Instagram, popular dating sites, etc., while pedophiles rely on these channels to obtain information and photographs of children, which are shared on hidden community sites. As criminals continue to harness technological advancements that are outpacing legal and ethical standards, law enforcement and government officials are faced with the challenge of devising new and alternative strategies to identify and apprehend criminals to preserve the safety of society. The Encyclopedia of Criminal Activities and the Deep Web is a three-volume set that includes comprehensive articles covering multidisciplinary research and expert insights provided by hundreds of leading researchers from 30 countries including the United States, the United Kingdom, Australia, New Zealand, Germany, Finland, South Korea, Malaysia, and more. This comprehensive encyclopedia provides the most diverse findings and new methodologies for monitoring and regulating the use of online tools as well as hidden areas of the internet, including the deep and dark web. Highlighting a wide range of

topics such as cyberbullying, online hate speech, and hacktivism, this book will offer strategies for the prediction and prevention of online criminal activity and examine methods for safeguarding internet users and their data from being tracked or stalked. Due to the techniques and extensive knowledge discussed in this publication it is an invaluable addition for academic and corporate libraries as well as a critical resource for policy makers, law enforcement officials, forensic scientists, criminologists, sociologists, victim advocates, cybersecurity analysts, lawmakers, government officials, industry professionals, academicians, researchers, and students within this field of study.

*Susceptibility vs. Resistance* Nataliya Levkovych 2022-04-19 The topic of the volume is the contrast between borrowable categories and those which resist transfer. Resistance is illustrated for the unattested emergence of grammatical gender, the negligible impact of English and Spanish on the number category in Patagonian Welsh, the reluctance of replicas to borrow English but. MAT-borrowing does not imply the copying of rules as the Spanish function-words in the Chamorro irrealis show. Chamorro and Tetun Dili look similar on account of their contact-induced parallels. The languages of the former USSR have borrowed largely identical sets of conjunctions from Russian, Arabic, and Persian to converge in the domain of clause linkage. Resistance against and susceptibility to transfer call for further investigations to the benefit of language-contact theory.
