The Reciprocal Modular Brain in Economics and Politics Gerald A. Cory Jr. 2012-12-06 The present work is an extension of my doctoral thesis done at Stanford in the early 1970s. In one clear sense it responds to the call for consilience by Edward O. Wilson. I agree with Wilson that there is a pressing need in the sciences today for the unification of the social with the natural sciences. I consider the present work to proceed from the perspective of behavioral ecology, specifically a subfield which I choose to call interpersonal behavioral ecology. Ecology, as a general field, has emerged in the last quarter of the 20 century as a major theme of concern as we have become increasingly aware that we must preserve the planet whose limited resources we share with all other earthly creatures. Interpersonal behavioral ecology, however, focuses not on the physical environment, but upon our social environment. It concerns our interpersonal

behavioral interactions at all levels, from simple dyadic one-to-one personal interactions to our larger, even global, social, economic, and political interactions. Interpersonal behavioral ecology, as I see it, then, is concerned with our behavior toward each other, from the most obvious behaviors of war between nations, to excessive competition, exploitation, crime, abuse, and even to the ways in which we interact with each other as individuals in the family, in our social lives, in the workplace, and in the marketplace.

De derde chimpansee Jared Diamond 2013-02-06
Mensen zijn voor 98% genetisch gelijk aan de gewone aap en de dwergchimpansee. Hoe is het dan te verklaren dat wij in staat zijn beschavingen, talen, godsdiensten en wetenschappen te ontwikkelen maar ook om dat in een oogwenk weer te vernietigen? Diamond schreef een baanbrekend, onderhoudend en soms schokkend boek over dat unieke schepsel en zijn evolutie: de derde chimpansee die mens heet. Scherp geschreven, een genot om te lezen. Deze uitdagende stijl van het boek dwingt de lezer ertoe zich grondig te bezinnen op het raadsel van de menselijke evolutie.? New York Times Book

Review Jared Diamond is hoogleraar fysiologie in Los Angeles. Hij verricht onderzoek op het terrein van de evolutionaire biologie en is bekend als internationale bestsellerauteur van onder andere *Zwaarden, paarden en ziektekiemen* en *Ondergang*.

Digital Zoology Jon Houseman 2001 This CD-ROM provides students in the whole animal Biology courses such as General Zoology, Invertebrate Zoology and Vertebrate Zoology with an

interactive guide to the specimens and materials that they will be studying in their laboratory and lecture sessions. Lab modules are the biggest components of Digital Zoology, and each contain illustrations, photographs and annotations of the major structure of organisms and microscope slides commercially available from the suppliers used by high schools and universities. Lab modules are combined with explanations of the various animal groups and interactive cladograms that allow students to investigate the major evolutionary events that have given rise to the tremendous diversity of animals that we find on the planet.

Waarom we altijd tijd te kort komen Dan Ariely
2010-04-28 Wanneer je mensen herinnert aan de tien geboden, zijn ze minder snel geneigd te liegen, ook als het atheïsten zijn. Een aspirientje van een

duur merk helpt beter tegen hoofdpijn dan een goedkoop eigen merk, zelfs al zijn de pilletjes identiek. Als we érgens op kunnen rekenen, dan is het wel op de irrationaliteit van menselijk gedrag. En dus maakt het niet uit hoeveel voorlichting een overheid geeft over de gevaren van onbeschermd seks: zodra de opwinding toeslaat, wordt het gezonde verstand overboord gekieperd, zoals Ariely met een amusant experiment laat zien. Waarom we altijd tijd te kort komen toont met verrassende voorbeelden en onderzoeken aan hoe slecht we in staat zijn de juiste beslissingen te nemen en hoe we met dat besef ons voordeel kunnen doen. Net als Malcolm Gladwell slaagt Ariely erin om de nieuwste inzichten over menselijk gedrag voor iedereen bruikbaar te maken

This is the third in a series of catalogs and bibliographies of the Cicadoidea covering 1981-2010. The work summarizes the cicada literature, providing a means for easy access to information previously published on a particular species or to allow researchers the ability to locate similar work that has been published on other species. A total of 2,591 references are included in the bibliography. The book is a source of biological and systematic information that could be used by zoologists, entomologists, individuals interested in crop protection, and students studying entomology as well as anyone interested in cicadas or who require specific information on the insects. Each genus/species is identified with the reference, the page number, any figures (if applicable), the topics covered by the reference, any synonymies, and any biogeographic information mentioned for the species in the individual reference. An added benefit to the

catalog is that it is the first complete species list for the Cicadoidea, including all synonymies and new combinations through 2012. Provides nearly four times the number of references of the previous catalog, demonstrating the explosion of data since that time Contains all references found that mention a genus or species name in the work Includes more than 300 additional references that were not in the two previous works on this subject Features the first complete species list for the Cicadoidea, including all synonymies

Zoology Stephen A. Miller 1993 The new 7th edition of "Zoology" continues to offer students an introductory general zoology text that is manageable in size and adaptable to a variety of

course formats. It is a principles-oriented text written for the non-majors or the combined course, presented at the freshman and sophomore level. "Zoology" is organized into three parts. Part One covers the common life processes, including cell and tissue structure and function, the genetic basis of evolution, and the evolutionary and ecological principles that unify all life. Part Two is the survey of protists and animals, emphasizing evolutionary and ecological relationships, aspects of animal organization that unite major animal phyla, and animal adaptations. Part Three covers animal form and function using a comparative approach. This approach includes descriptions and full-color artwork that depict evolutionary changes in the structure and function of selected organ systems.

General Zoology Stephen A. Miller 1998-06 This General Zoology Laboratory Manual is intended for students taking their first course in zoology.

Provided are exercises and experiences that will help students: (1) understand the general principles that unite animal biology, (2) appreciate the diversity found in the animal kingdom and understand the evolutionary relationships that explain this diversity, (3) become familiar with the structure and function of vertebrate organ systems and appreciate some of the evolutionary changes that took place in the development of those organ systems, and (4) develop problem-solving skills.

Earthworm Assisted Remediation of Effluents and Wastes Sartaj Ahmad Bhat 2020-07-01 This book

provides updated and comprehensive information on the effective functioning of earthworms used alone or in combination with other biological systems/microbes, as well as factors affecting the process and performance of vermiremediation under a range of conditions. It also compares earthworm assisted vermifiltration with other conventional biochemical methods. Presenting cutting-edge research on the earthworm assisted remediation of industrial and municipal effluents and sludges, along with its role in solid waste management (SWM), the book will benefit readers from the research community and industrial sector alike, familiarizing them with the latest remediation techniques for wastewater and different types of solid waste.

Combined Discrete and Continual Approaches in Biological Modelling Alexander E. Filippov

2020-06-30 Basic laws of nature are rather simple, but observed biological structures and their dynamic behaviors are unbelievably complicated. This book is devoted to a study of this “strange” relationship by applying mathematical modeling to various

structures and phenomena in biology, such as surface patterns, bioadhesion, locomotion, predator-prey behavior, seed dispersal, etc. and revealing a kind of self-organization in these phenomena. In spite of diversity of biological systems considered, two main questions are (1) what does self-organization in biology mean mathematically and (2) how one can apply this knowledge to generate new knowledge about behavior of particular biological system? We believe that this kind of “biomimetics” in computer will lead to better understanding of biological phenomena and possibly towards development of technical implications based on our modeling.

Endocrine Disrupters Peter Matthiessen 2013-02-04
Enables researchers to assess the effects of endocrine disrupters as well as comply with new environmental regulations Endocrine disrupters are chemicals—both man-made and natural—that

interfere with the body's endocrine system, potentially resulting in adverse developmental, reproductive, neurological, and immune effects. In recent years, a number of regulatory authorities around the world have drafted or enacted legislation that requires the detection and assessment of the effects of endocrine disrupters on both humans and wildlife. In response, this book provides comprehensive, up-to-date information on the latest tested and proven methods used to detect and assess the environmental hazards posed by endocrine-disrupting chemicals. *Endocrine Disrupters* is divided into chapters covering each major taxon as well as chapters dedicated to hazard assessment and regulation. The book covers testing methods for all the vertebrate groups and several invertebrate phyla, including: Crustaceans and mollusks Insects Fish Amphibians and reptiles Birds and mammals Moreover, the book emphasizes

practical, ethical testing methods that combine sensitivity, efficiency, statistical power, and reasonable cost. Each chapter is written by one or more international experts in ecotoxicology, offering readers step-by-step guidance for implementing each method based on the latest research and the authors' firsthand laboratory experience. Furthermore, all the chapters have been subjected to a rigorous peer review and edited in light of the reviewers' comments. References at the end of each chapter guide readers to the literature in the field. Endocrine Disrupters is recommended for scientists who need to test chemicals for possible endocrine-disrupting properties. It is also recommended for regulatory authorities who need to decide whether particular chemicals can be safely marketed.

Life Ricki Lewis 1998 This comparative, concepts-based text provides an introduction to biology. It features: expanded coverage of evolution; new chapters on biomes and the origins and diversity of life; a unit on behaviour and ecology which includes coverage of ecosystems; essays on bioethic connections which discuss ethical questions arising due to improved biotechnology; and a discussion of chemistry.

The Evolution of Multicellularity Matthew D.

Herron 2022-06-08 Among the most important innovations in the history of life is the transition from single-celled organisms to more complex,

multicellular organisms. Multicellularity has evolved repeatedly across the tree of life, resulting in the evolution of new kinds of organisms that collectively constitute a significant portion of Earth's biodiversity and have transformed the biosphere. This volume examines the origins and subsequent evolution of multicellularity, reviewing the types of multicellular groups that exist, their evolutionary relationships, the processes that led to their evolution, and the conceptual frameworks in which their evolution is understood. This important volume is intended to serve as a jumping-off point, stimulating further research by summarizing the topics that students and researchers of the evolution of multicellularity should be familiar with, and highlighting future research directions for the field.

DNA Technology I. Edward Alcamo 2000-04-26
DNA Technology, Second Edition, is a survey of biotechnology written to enlighten readers about

the breakthroughs made possible by the science and technologies associated with current DNA research. Ed Alcamo gives the educated layperson a survey of DNA by presenting a brief history of genetics, a clear outline of techniques that are in use, and indications of breakthroughs in cloning and other DNA advances. Appropriate for a wide range of courses for non-biology majors, including a DNA for Lawyers course or allied health and nursing courses. After reading this book, individuals will feel more confident in their ability to understand contemporary newspaper and magazines articles referring to DNA technology and human genetics. Business people will make more confident decisions in their dealings with biotechnology issues. Lawyers and jurists will have a better appreciation of DNA fingerprinting. Persons with genetic disease will have a clearer understanding of their afflictions and understand the bases for possible

cures. Agriculturists will have insight to the genetic basis for gene-altered plants and animals. And the general public will better appreciate the nature and reasons for the Human Genome Project now in progress.

Vertebrate Biology Donald W. Linzey 2020-08-04

Arranged logically to follow the most widely adopted course structure, this text will leave students with a full understanding of the unique structure, function, and living patterns of all vertebrates.
